Social Political Sciences, 3rd stage student*

**Annotation:** *One of the leading, main components of high spirituality is patriotism. Therefore, they approach and interpret the concept of patriotism from different angles. In our opinion, patriotism means that a person values his motherland and spends his energy and energy for this motherland, regardless of its field. Although this definition does not cover all aspects of patriotism, the definition is correctly understood if the word patriotism is approached in a broad sense. In this article, there are thoughts and opinions about uniting young people in the spirit of patriotism and in the path of development of the motherland.*

**Keywords:** *youth, patriotism, values, loyalty, concept of homeland, education and upbringing.*

**Introduction:** Patriotism means love and loyalty to the country, service for the country, sacrificing your whole life and potential, if necessary, your life. Patriotism is one of the universal feelings and spiritual values characteristic of all peoples, nations and peoples, and has been refined over the centuries. From a historical point of view, patriotism is a set of emotions associated with the fate of the Motherland, the struggle of peoples for the integrity and independence of the territory in which they live, in the process of socio-economic development of people. To be proud of the country's past and present, to care and worry about its future, to protect its interests.

The feeling of patriotism is in the people's deep knowledge of their history and pride in it, in preserving the material and spiritual heritage created by the great ancestors like the apple of an eye and passing it on to future generations, the ancestors' traditions, customs, learning the heritage and continuing the part that has become its value, especially the future of our country, the stability of its independence, sincerely feeling the greatness of its future, and earnestly helping to build such a future is reflected in hundreds of qualities. After all, the fate of any nation is determined by the education of its future youth. Modern thinkers also paid attention to the importance of education in the life of a person and society.

The concept of humanitarianism is also a broad concept. Charity is kindness, loyalty and sincerity towards people. Many concepts are expressed in the concept of humanitarianism. Examples of these concepts include honesty, faith, hospitality, respect, justice, honesty, generosity, patience, understanding oneself and others, loyalty, hard work, and sincerity. Therefore, these concepts are important factors in the formation of humanity.

Wide use of their opportunities, for this it is necessary to educate not only the process, but also in extracurricular activities, the owners of tomorrow, truly patriotic people in the spirit of independence. Heroes of literary works, historical figures, heroes of the Motherland are the brightest examples in forming a sense of patriotism in students, first of all, love for the motherland, loving it, honoring it, teaching everyone to commit suicide. The person contributes to its development. It is also necessary to

preserve art, historical and architectural monuments, which are considered the cultural heritage of the Uzbek people, and to know their history and significance today.

The teacher should teach students to be loyal to their nation, to form in them healthy strength, thinking, faith and clear conscience, to live for the benefit of the nation, Motherland, country, to educate them, to inculcate responsibility towards the Motherland, to form an all-round healthy lifestyle. Only when they try to find different ways and means to think and encourage the development of the country, to contribute to raising the prestige of the nation, to bring benefits, to work with selflessness and honesty, the honor and interest of the people, wide opportunities are created for the formation of a sense of patriotism in students so that they become humane. In order to form a sense of patriotism in students, it is necessary to use all forms of new pedagogical technology, to find and create new forms of it, and above all, to teach students to think independently, to respect and value the Motherland. After all, the beauty of the homeland is such a pleasant concept that it can arouse pride and pride in the heart of every land owner.

Ensuring justice and peace among people is also patriotism and humanitarianism. In turn, these processes affect people's spiritual-educational and moral conditions. At the same time, it is an important means of educating young people in the spirit of humanity. Violation of humanitarian norms and duties has a negative impact on mutual equality. It destroys spiritual training.

A philanthropist person has a sense of the Motherland. He understood more than others that there is no greater blessing than the motherland. The soil of the motherland is pleasant. That is why a humane person puts the interests of the Motherland above his own interests. He lives and creates with this interest. He brings joy to others from his work. He gives pleasure to others with his creations and he himself is satisfied, that is, he is patient. Self-awareness means knowing one's homeland and the past of the people who lived in this homeland, its culture, traditions, and values. Self-awareness is the awareness of the contribution of one's people to the development of the world community. Self-awareness - perfect knowledge of the history of the past ancestors, respect for their spirit, determination of the development of one's country as a result of national self-awareness is an example of the struggle for its independence. Self-awareness is used to determine one's own destiny in the future, increases responsibility. Conclusions are drawn from the dedication and courage of the ancestors.

Self-awareness is such a unique process that reaching its essence forms in a person unlimited love, kindness, and common humanity. If people do not have national consciousness, it is difficult to understand the national interest. If the national consciousness is high, at the right time, that is, if there are events and actions that lower the dignity of one's nation, damage its spiritual and material wealth, and destroy its pride, unity and protection are manifested. Our people are living in a time when they are living a peaceful life with noble and lofty goals, relying primarily on their own strength and capabilities, achieving great results in building a democratic state and civil society. Today, the Uzbek people determine our own destiny, relying on our ancient values, taking into account the experience of developed countries, living with promising and noble aspirations, building the free, prosperous life that our people have been waiting for centuries, all our opportunities and we understand that the international community has recognized the achievements we are making in this way - this is the honor of independence.

It is necessary to start uniting the youth for the development of the country from the family. Because family is a part of society. So, the family supplies the necessary personnel to the society. The child

grows up in the family. The role of the family school in this process of growing up is incomparable. Love and respect for family, parents, loved ones will later be embodied in the word "Motherland". Therefore, qualities such as humanitarianism and patriotism create a foundation for the spiritual growth of young people. Even when we tell stories to our children in the family, our use of national tales, legends and narratives creates the future of our country by using the spiritual heritage of our ancestors and conveying the courage and bravery of the heroes there. The need not to exchange the homeland for anything, to consider even a piece of its soil as sacred.

**Conclusion:** In short, at the moment, developing our youth's sense of patriotism, teaching them to deeply understand the essence of the Motherland, explaining that patriotism is a high moral principle is the basis of our moral values. Education of the young generation in the spirit of patriotism has a special place in ensuring the independence of our country. That is why patriotic education is the demand of the times. Educating deep-minded young people imbued with national patriotic ideas is the main factor in realizing national identity. Therefore, it is necessary to educate each of our young people in the spirit of high patriotism. After all, patriotism is the main necessity of our social life, because without it there will be neither creativity nor development.
