Annotation: this article, which is one of the most pressing areas of science the concept of a frame has been analyzed from the theoretical side and the need to put forward the thought that many of the scientists mentioned.

Key words: frames, logic, cognitive, and social, konsept, psychology

As it is known to us, a person's life experiences based on his in mind certain stocks of knowledge accumulation and the contact information of the trade is based on the perception and enforced. Being human means or in any position in their knowledge of him, that is, the memory supports frames. Summarize the opinions of various scientists and linguists fre case in m to the terms, you can give the following comments.

- 1) cognitive phenomena frames of this language;
- 2) knowledge about the details of the object;
- 3) the attitude of the knowledge about objects and subjects;
- 4) set the action in social interaction.

Ch. According to Filmorning, a frame – and long-term view of the expression referring to this konseptual-term memory is stored in regulation with experience. Some elements of the cultural landscape of human experience that is associated with the frame connects with the unit.

Ch. It was one of the film noted that any device that is connected to the frame of the words and grammatical words (or grammatical structure) are not bound himself understood independently from frames that are linked to meaning.

The article frames the vocabulary in 1985 in order to distinguish them from a certain konsept
Ch. Poor understanding of the range of geshtalt the form of the film into the science of psychologist and interest will bring. Vocabulary unit and stating the basis of the form reflected in the form of a special sense of the range of interest, which represents a significant part of it is a larger frame. "For the same reason frames, for example, a group of words related to each other grammatical understanding and knowledge that represents the structure of the complex play an important role in determining their properties".

Ata frames ashurova d. u. I have adrive describes as follows: "a special language in the process of Perception in the form of a special place they called their knowledge structure and is prepared with the help of the frames. In academics, as well as schemes, scenarios, plans and terms are also available, like I spotted it. Knowledge of the facts taken separately, but not ierarxik complex of the system, the sum of the data provided to model specific cognitive cfatir assesses. Language structure and study the connection between their mental models of the system that frame analysis , it was noted, showing his stages will take. The analysis of text frames is a gradual process, it includes:

- a) representing the frames alarms important oral konseptual search;

b) depends on the interaction semantikasi specific to their frames, find that the contextual link majoz;

d) knowledge of the structure, functions and activate muammoviy konseptual;

e) konseptuallashtirish done in the form of text information (synthesis, conclusions signal based on the knowledge of their frames and oral form)".

Ashurova d. u. Professor's noted that noted that all stages of the analysis process the analysis of text and contributes to the cognitive frame. Restore bonding components and their analysis in the process of etishmaydigan frame can be hidden; the end of the process is hidden meaning and the conclusions. "The most interesting fact is that the frames can be used in analysis of works of art also intentionally".

Hugesning "american also called" a vivid example of this is in the works. Text analysis before the analysis, the new text's seen in the form of dialog that is, it is necessary to pay attention to the fact. Because the author and one of the heroes of the game the game black south african who is Simple with imaginary conversationsiis. The main focus in the game to focus on racial discrimination. The word black to this problem through the analysis of the landiwas shib. In fact, this analysis frame analysis can be called. "Sometimes a writer, sometimes a simple black and his appeal, which have been embodied by the negative meaning of the word discuss of the image, which shows the structure of the language knowledge and will help you to understand ensiklopedik"

The meaning of this word stored in memory associated with the realities of life and the appeal of the executive units using different languages is reflected in the text: *the black ball, black list, black heart, black letters, black market, black cat, black logic, black stain, black sheep* (black sheep in the family that caused him to restore the honour of a family member). This combination has the form of frames and thoughts clearly shows a negative meaning. For example, "the black cat," phrase "failure" because of the way the majority of folks associated with the concept of failure to pass cut the black cat says assessed. The "black letter" while the threat is a combination of force and meaning. "Black" is the word associated with the number of combinations can be increased easily. They does not occur in this game, although in the system of language is used in a negative sense: *qoraytirmoq, black guard, black legs, black shirt, black market* like it. Relying on the knowledge of language and life experience, not simply "black" wordof the source of explain negative meaningmake it worka I will try. In his opinion, the relationship between these men moved to the area. In order to represent opinion, it also will bring other examples, but in general this word reverse in this example, that is used in a positive sense:

1. The soil is black and all things emerge from the soil.
2. Coal black, but heat the house and cook the food.
3. The black of night, but the moon and thousands of stars with very much beautiful.
4. Sleep in black, but can restore it to the man, to make yourself feel better will help.

"This text is in many respects interesting. First of all, create it and to receive comments related to the expression of frames received word and provides the mechanism. Here is "black" and frame it serve as the basis for analysis different cognitive operations of the word according to its meaning can change from negative to positive".

Uzbek literature much in such examples only. For example, vohidov e. "the servant qoshing..." that boshlanuvchi in the game (the servant qoshing pen qoshing, slits, qayrilma qoshing, girl. I executed my revenge qayrab – the killer sword qaroshing girl. Vohidov E. "the servant qoshing") of the eyebrow as a frame, the beauty looks. In this place, *black, executions, revenge of* the expression of the elections in the words of the original negative meaning also, the beauty of this positive meaning of the word they are out of frames. O'zbeklarda also because *black* is the word

often in a negative sense (mourning, kiymoq black, black day, black is the intention) is used, *executed* (executed, does that make, make executed), *revenge* (revenge revenge of make). The negative of this word arxisemasida konnatatsiya hidden if it is a negative meaning in national-mental features is associated with. The conclusion of this feature, a lot of people formed on the basis of age and life experience. Vohidov E. g'azal to frame the beauty of the words noted above, however, serves to exaggerate the effect of negative frames and the game will take you to the next plan ottenka in them.

Ta'rificha of scientists, in the following framesn foundeddi: the binding of contents (participation required) and nomajburiy (not force participation) features. Mandatory frames features – part of the semantic structure of language in the expression lisoniy realities are intertwined and mutually parts of the unit. Clarification of the structure of the frame while it performs the function of optional features.

Frame analysis iboratki that the main purpose of the language is given in the concept of a condition or situation that is manifest in the brain as a whole, our brain and this is only one concept established deny that stay will. The idea of the words in English and example to prove the above quotes by joint analysis of the frames if you pay attention to the exported table.

Table 1.1. “Honeymoon” frames of

| Honeymoon | | |
|--------------------|------------------|----------------------|
| Arrangement | Departure | Entertainment |
| Marriage | By planet | Holiday |
| Money | by train | romantic scenes |
| pack your | car | luxury hotel |
| Documents | 've seen off | Exotics |

The English language is honeymoon joint word Uzbek language is also the joint of the word is honey in as translated to.

Table 1.2. “Honey month” frames of

| Honey in | | |
|------------------|--------------|-----------------|
| the plan | to leave the | entertainment |
| Wedding | Poezd in | Ta' language |
| Money | in the bus | romantic places |
| of the documents | plane of | the exotic |
| to place things | goodbye to | Hotel |

Certain features in the structure and binding in nomajburiy frame analysis in frame "the area of boxes" (slot) takes the form of the object in perception and reality of this gap should be filled with sample data and in the process to suit the area. The words standing in the slot and the key word is called the horizontal direction (in honey, honeymoon hearrollers come close to our minds with the first word (plan, leave...) or which express the same concepts yondosh the words will come. This, in conjunction with the vertical line in the words sabslotlar (small gap area), using the small slot of the slot, ie after they mindis the words that appear mizda.
