Abstract: *This article analyzes the prospects for educating the younger generation in Uzbekistan in recent years, creating all the necessary conditions for its independent life, modernizing the content of education, improving the quality of education, creating and introducing innovations in education, as well as innovative education. At the same time, the issues of improving the education system, raising it to a qualitatively new level, and developing modern knowledge and skills in students are analyzed.*

Keywords: *education, upbringing, spirituality, innovation, modernization, Higher education, quality of education, action strategy, development strategy, social development, modern knowledge, Renewed Uzbekistan.*

After the new Uzbekistan gained independence, radical changes began to take place in our socio-political, economic and spiritual life. In particular, carrying out deep reforms in the field of spirituality is a clear example of this. In this regard, raising a well-rounded child and creating his spiritual and moral image for today and tomorrow is one of the most urgent issues. In our country, attention is paid to education and training at the level of state policy. Indifference to the education of the young generation is equivalent to indifference to the nation's prospects.

The main goal of Uzbek development is to build a legal democratic society based on the market economy. Based on the main goal, the main tasks are to implement reforms in all aspects of society: economic, political, legal, social, etc. The tasks set by the head of our state Sh. Mirziyoyev open the door to wide opportunities and assign each of us unique responsibilities. We believe that the priorities and goals presented in the development strategy of the new Uzbekistan will become a program of great importance for all of us[11].

Nowadays, in the process of globalization, foreign spiritual influences are trying to take the place of national spirituality and worldview. In addition, through the most modern means of telecommunications, computers, and the Internet, there are examples of public spirituality and culture that are contrary to national identity and aimed at its destruction, and at the heart of which there is no noble goal other than profit - immoral films, TV series, stupid shows keep coming.

In this process, the national language, national values and views are left aside. If this is not prevented in time, the danger of the destruction of national identity will increase. This is a great tragedy for all mankind.

Because the greatness of a human child, first of all, is manifested in his understanding of his nation, living with pride in it.

National education is of great importance in forming a perfect generation. National education refers to the direction of activity in the formation of national consciousness, worldview and spirit in young people through national heritage, customs, traditions and values, to realize their identity, and to increase their responsibility to the people and the Motherland.

A person's development in life depends on the society, its priority views and values, and the educational system that serves to inculcate and strengthen them. "I," writes Islam Karimov, "observe Abdulla Avloni's opinion that education is a matter of life or death for us, or salvation or destruction, or happiness or disaster".

These words of the great enlightener were as important and relevant for our nation at the beginning of our century, they are as important and relevant for us today". In these encouraging words of Alloma, the center of education is not just one child, not the children of one family, but the whole nation, the whole people. This is probably the reason for raising education to the level where it decides the fate and prospects of the nation.

In the conditions of independence, special attention is paid to the reform of the education system, as well as to all spheres of social life, to strengthening the national ground of the education system, to bring it to the level that meets the requirements of world standards. According to the words of the President of the Republic of Uzbekistan Shavkat Mirziyoyev, "every person living in this country has created all the necessary conditions for a peaceful and happy life, for his health, to get a good education, to raise his family." we are trying to give and we will never stop.

Improving the quality of education is the only correct way of development of New Uzbekistan.

As our grandfather Yusuf Khos Hajib said:

"Where there is intelligence, there is greatness,
Where there is knowledge, there is greatness."

Therefore, we should continue the reforms we have started in this field, go to educational centers, communicate more with teachers and trainers, and jointly solve the issues raised by them to improve the quality of educational work [1].

National education begins in the family and is continued in the neighborhood and education system. A person with a developed national consciousness, self-awareness, and a formed worldview glorifies the people and the Motherland, understands his responsibility to the nation and protects its interests. He always feels that the homeland, the nation, is the highest blessing for a person, a great spiritual wealth. But today's process of globalization has begun to have a negative effect on national education. Today, our spiritual life is threatened by foreign customs and traditions, immorality. Of course, we can accept customs and traditions that are acceptable to us. But accepting them blindly is a sign of ignorance.

Modern life today cannot be imagined without the development of science and education, as if humanity revolves around the axis of science. It is not for nothing that the development of education in the leading countries of the world is defined as the first task. After all, the future development of the country is closely related to its achievements in this field. In the words of the President of the Republic of Uzbekistan Sh. Mirziyoyev, "It is clear to all of us that the cornerstone of development and the force that makes the country powerful and the nation great is science, education and upbringing. Our tomorrow, the bright future of our country, is closely related to the education system and the education we provide to our children" [22].

In national education, the issue of not taking something from someone, but giving something to someone should be in the center of attention. In Japanese spirituality, even in today's era of globalization, it is difficult to notice signs of external influence. It is clear to many that national

education plays an important role for the Japanese in organizing production, creating advanced techniques and technologies, and occupying world markets. If we use such experiences, we will never lose.

In short, to raise a mature generation that can resist ideological and spiritual threats today, to raise legal awareness and culture, to raise the cooperation between the holy place - the family and the spiritual place - the educational institution to a new level. It is no exaggeration to say that it is carried out through. Not only teachers, but also every citizen who is not indifferent to the fate of this country is responsible for education, which defines our tomorrow. Therefore, knowing our history well, promoting the foundations of our national ideology and spirituality is not enough to master the heritage of our ancestors, but we should enrich them through our practical work and educate the young generation in such a spirit.
