

EDUCATION OF YOUTH IN THE SPIRIT OF PATRIOTISM

Rashidova Baxti Yaxyayevna¹

Musaeva Suikum Tulembaevna²

Abstract: *The Uzbek national education system, while adopting best practices, has not abandoned the oriental methods that have been formed over thousands of years. In the East, in particular, in the Uzbek education system, special attention always has been paid to such qualities as the upbringing of young people, morality, patriotism, diligence, creativity, humanity.*

Keywords: *Motherland, patriotism, youth, high morals, spirituality and enlightenment, conscientious attitude to work, science, national values*

Patriotism is one of the deepest human feelings, fixed for centuries and millennia. It means devotion and love for one's Fatherland, for one's people, pride in their past and present, and readiness to protect them. Patriotism is the most important spiritual asset of a personality, characterizes the highest level of its development and manifests itself in its active self-realization for the benefit of the Fatherland. The topic of patriotism is very relevant today. Speeches by senior officials of the state, reports by public figures, and articles by historians raise the problem of patriotic education.

This problem covers all people without exception, regardless of their religion, race, gender, culture, spiritual and moral development. And first of all, this problem concerns young people.

Speaking about such a concept as patriotism, it is necessary to mention some distinctive features of the modern era. First of all, this is the moral state of the youth. One of the most important issues of education today is the formation of the need for love for the Motherland, knowledge of its history. After all, patriotism is an integral and integral part of the national idea, an integral component of culture and science. Patriotic education of the younger generation is an urgent task at all stages of the development of society. Patriotism is one of the deepest feelings formed over millennia in the national traditions of our people.

The modern experience of fostering patriotism among young people:

- Long-term departmental and regional programs of patriotic education, normative legal acts in the field of patriotic education have been adopted and are being implemented, as well as conditions have been created for organizational, informational, scientific and methodological support of patriotic education.
- The organization of patriotic education is being improved. The level and effectiveness of art festivals, contests, exhibitions and competitions have increased.
- Military sports games and other events aimed at military-patriotic education of young people are held.
- Traditional forms of educational work that have proven themselves well in the past are being revived.
- Training and retraining of organizers and specialists of patriotic education have been organized.

One of the features of modern patriotic education is the increasing importance of a person's connection with the place where he was born, with his small Homeland. Young people are increasingly showing a keen interest in the history of their educational institution, district, city, and region. The opening of new museums and exhibitions, the organization and expansion of all types of local history activities, exploratory work, tourist and local history programs, heroic and patriotic actions - all these are forms of patriotic education.

Holding such events cannot leave young people indifferent to the trials that have befallen the older generation, to the future of the Motherland, to the defense of the Fatherland. And this is confirmed by the increasing number of young people who want to take an active part in organizing and conducting patriotic events. Special attention is paid to the museums of military glory. The work of collecting documents, materials and exhibits during tourist and local history expeditions directly at the places where historical events took place has a great educational impact on students.

To educate future patriots in the face of modern youth, it is necessary to cooperate with educational institutions, families, teachers and children themselves. Only by helping each other, you can achieve the desired goal - to raise a true patriot. The development of each nation depends on the attitude of young people to the national idea and values, on how it affects the consciousness of young people and to what extent young people rely on the national idea in their practical activities. Young people make up more than half of the population of the republic. It also depends on the awareness of the national idea by young people, on turning it into faith and conviction.

To put it another way, as far as the national idea will be meaningful and will serve to determine the goals and interests of each person planned for the future, as a result of the whole nation, it will be so quickly perceived by young people and show their positive attitude towards it. Therefore, what ideas and thoughts will the youth society offer through the national idea, accordingly, it will have ideologically hardened, patriotic youth who have mastered modern knowledge. Young people have a strong interest in innovations and the need to turn them into a belief due to the fact that they are in the initial stage of formation, they have physiological and psychological qualities. The importance of the national idea in mobilizing and inspiring young people for a great future, the place and role of the idea in education and upbringing will be determined by how much it will correspond to the truth of life, reality, and the life of the people.

Cultural heritage, national values of the people, the lives of great thinkers, and today's achievements play an important role in the formation of a sense of national pride, honor, and conscience. In introducing the ideas of social justice into the minds of young people, such famous works as "The City of Just People" by Abu Nasr Farabi, "Blessed Knowledge" by Yusuf Khos Hadjib, "Regulations" by Amir Temur, "Mahbub ul-kulub" by Alisher Navoi serve as a scientific and historical source. It is impossible to create a modern innovative economy, bypassing the teacher, the state and quality of his inner life, because the pace and nature of the development of society directly depend on the civic position of the teacher, his moral beliefs. It is absolutely justified that the Republic of Uzbekistan has adopted the law "On the establishment of the Order of the Honorary Coach", which will be awarded to citizens of the country for educating young people in the spirit of love and devotion to the Fatherland.

A state with a great future should first of all take care of the culture, education and spirituality of its citizens, the future generation. Everyone knows that on June 29, 2023, the Resolution of the Cabinet of Ministers of the Republic of Uzbekistan "On measures to improve the effectiveness of military-patriotic education of youth" (No. 267) was adopted "As you know, patriotism is the moral foundation of the viability of each state and acts as an important mobilizing resource for the comprehensive development of society. Based on this, we must take concrete steps to form a strong

immunity among citizens against the negative impact of ideas alien to us and strengthen a sense of responsibility for the fate of the fatherland. Young people who have passed the army school of courage, perseverance and faithful service to the motherland can become a reliable support in this difficult work." The Concept of educating young people in the military-patriotic spirit is devoted to these issues.

In order to solve the existing problems of patriotic education of young people, the development of patriotic culture, in our opinion, it is necessary to consider the following issues:

- on giving patriotism the status of a state ideology;
- on the introduction in all educational institutions, including the military, of a planned study of the theoretical foundations of patriotism.

The implementation of the proposed measures may to some extent contribute to giving patriotic education a new impetus to activity, which will allow to raise a new generation of patriots who are able to take over from the older generation and continue the work of preserving the territorial integrity of the state and strengthening the economic and defense power of the country. And the enormous potential of national heroes requires revival, comprehension and practical application with maximum consideration of its social relevance and state significance.
