Annotatsiya: the successful performance of educational tasks in the educational process, the formation of not only scientific knowledge but also the development of spiritual and moral aspects of the personality of the students at also important. In the article various educational functions of the implementation of pedagogical methods of the classes, methods and forms of organization will be covered. Also, the modern technology of teaching, the importance of the interactive method and the communicative approach is shown. To work effectively with students, and independent thinking, and social responsibility in the educational process to work in teams to teach one to feel the importance of the realization of the functions is stressed.

Keywords: UNIVERSITIES, training sessions, educational features, pedagogical methods, modern learning technologies, interactive methods, communicative approach, students in the educational process, social responsibility, personal development, independent thinking, team work.

The educational process is of great importance in any training environment. Therefore, often this understanding both side-by-side comes in the form of education on a basis. Of course, to give education to every person tarbiyali qanDin the form of education cannot be easy. Higher education institutions in the country of business education educational functions critical for several reasons the implementation of the method is.

Characteristics of education: institutions of modern education is not only knowledge and skills, but also the formation of personal qualities strives to readers. This educational functions will become an important part of the learning process.

Social change: social and ethical standards to promote the education of a rapidly changing world requires the adaptation of the approach. University social responsibility, and cultural must respond to new challenges associated with inklyuziya kompetentsiya.

Personal development: higher education institutions in the educational work of the comprehensive development of students personality will help. This critical thinking, self-management, plays an important role in the preparation of active citizens able to participate in community life.

Psychological health in the future: the professional practice of education and educational work of students in the conditions of psychological stress associated with their emotional wellbeing will help you develop and maintain stability.

Professional education: many work not only technical knowledge, but also to high ethical standards, requires leadership qualities and communication abilities. These qualities of educational work in higher educational institutions helps in the formation of

professionals in the future.

Globalization and international business: globalization in the context of a diversity of cultures educational affairs the honor of absorption is important, requires a while to develop this special education programs.

These aspects, taking into account the development and introduction of effective methods of educational work in higher education institutions improve the quality of the educational process, qualified responsible professionals to prepare and has a great impact.

UNIVERSITIES of education in the world educational activity of the student is directed to the formation of fully developed identity function. This moral, intellectual, cultural and social qualities include the development of. This process, the main goals and objectives, as well as the methods considered in the implementation of this function you have.

Universities foreducation in the country the purpose of the function:

hala disorder, responsibility, respect to strangers, patriotism contribute to moral qualities such as nurturing;

talaba ijtimoiylashuv of them to promote active participation in the life of the church;

tashabbus, independence and critical thinking supportsh;

mand under further development of aesthetic perception of muslims, to get acquainted with the cultural traditions include.

Education the function vazifalarwhile sh igaprofessional development and the development of favorable conditions for storage axsi, talaba before the responsibility to prepare and civil society actively, talaba of preparation for life and work in modern society, including the development of communication and cooperation skills, tconditions for the formation of creative alaba to realize the self, o'ethical and social issues, covering topics educational program to add, jamoaviy aimed at the development of cultural spirit and leadership qualities, the organization of sports and social events, talaba and critical thinking and analytical skills to the project which will help to attract, o'qitish and the big ones in the age of adaptation to new students and those who come to develop a system which will help towards the development tutoring, talaba of online platforms for insights and motivation to raise social media and the use of interactive methods, talaba tips for overcoming personal difficulties and stress for the organization of seminars and training as skip counting.

Effective implementation of the functions of education, teachers, administration and the complex approach and requires close cooperation between students. Educational evaluation and monitoring of the results of work also is an important factor in its further improvement. UNIVERSITIES in the functions of business education in the world educational and personal qualities that are necessary to successful integrasiyalashuvi students and professional society activities, social and ethical principles is focused on the development of kompetentsiyalarni. Thus, asauce of education functions are:

Ijtimoiylashtirish: students of society, social norms and cultural values will help you configure to share. The development of this communication abilities, social responsibility and ability to work in team to understand radios.

The formation of outlook: university critical thinking, analysis, and help to

Impact Factor: 9.9**ISSN-L: 2544-980X**

develop ability to synthesize information, as well as helps in the formation of conscious attitude to the students in different aspects of life.

Moral education: the student professional ethics, and professional life, personal honesty, and responsibility include the development of the form of understanding about the principles of justice.

Personal development: the development of individual skills and talents, readers, set his own destiny and self-realization aimed at. Thus, it includes support for career and personal growth.

Patriotism education: that students belonging to a certain country, respect its history and culture, as well as to participate in the development of it will help you to understand.

Health education saving educational to give up bad habits and healthy lifestyle, including their health strives to the formation of a conscious relationship.

Environmental education: the readers responsibility to provide the development of the mind and the environment on the environment.

If these features depends on the interaction of readers to the comprehensive development, aims to prepare them to lead active and productive life in society.

UNIVERSITIES of education in the country and the prospects of the realization of various functions can be observed through changes in historical approaches to the education system, this is also at the society also reflects the development of pedagogical theory.

Until the 20th century: the classical model of education. The main focus of the university in the middle ages of european religious and ethical values, I am directed to transmit. Coaching education activities often united the elements, this erda teacher had moral authority. To comply with the prescribed discipline and manners is the main components of education.

The beginning of the 20th century: the industrial paradigm. The main focus in the new sectors of the economy sanoatlashtirish to prepare specialists for the period paid. The development of critical thinking, team work and responsibility in the education program are included. Civil and etak leadership abilities of students who play a role in the development of the team and the organization structure.

Soviet period (russia and cis countries). Education becomes the means of ideological education, collective and patriots, it was noted nations. Students are actively involved in social activities and komsomol organizations pioner executive is developing. The process of education not only education, but also in addition to the work from the lesson, that is, the freshness of the day, political information also will cover.

The end of the 20th century: globalization and the information age. With the growth of information technology and globalization are changing the role of the university: they are more autonomous and at the international level. Functions of education, personal development, communication and critical thinking madaniyatlararo noted, adapted to the new problem. Education is becoming an important part of the program to participate in volunteerism and social projects.

The 21st century: approaches and subject integrasiyalashgan. Education for sustainable development, tolerance and are considered in the context of inklyuziya.

Impact Factor: 9.9**ISSN-L: 2544-980X**

Social and emotional skills such as the development of new educational and interactive learning that includes mixed models are introduced. The promotion of ethical values and social responsibility is aimed at increasing the role of humanities and social sciences.

Modern universities in the world, active introduction of information and communication technologies, students education support initiative through cooperation with various international organizations and church functions and integrasiyalashda continue and get through this, students not only professional, but also as active citizens of society is preparing.

UNIVERSITIES in the world educational activities of the educational functions of the person the form is a key part of the implementation of the comprehensive advanced students. Readers of the functions of education on personal and professional development that contributes to moral, ethical, cultural and social is focused on the development of qualities. Thus some methods that can be used to perform the functions as you can see below:

Integrasiyalash elements of education in the educational process:

- o'educational program to ethical and social issues;
- axloqiy conversation topics and seminars in character organization.

Kuratorlik work:

- talaba adapted to the new environment, which will help in addressing various problems and arguably the appointment of the group to become an intermediary kuratorlarini;
- kuratorlar regular meetings between students and the actual problem and discuss the problems.

The organization of extracurricular activities:

- talaba association and the creation of the club of interest;
- talaba of solidarity, offering them leadership qualities that develops sports, cultural and intellectual activities.

The development of social partnership:

- tmeetings with representatives of professional and public organizations of the url, the organization of lectures;
- talaba and volunteers to participate in the effort to attract social projects.

Personal and professional advice:

- talaba psychological services to help the work of help.
- shaxsi conduct for professional leadership training and professional growth.

Higher education institutions, the preservation and development of traditions:

- tarixiy and the organization of cultural events;
- itniversitet to promote respect for history and traditions.

The use of modern technology:

- joriy the introduction of online platforms and social networks for social and cultural topics to discuss;
- tanqidiy thinking and ethical values aimed at the development of educational content.

This method helps to create a comfortable learning environment, the students not only the knowledge, but as a person able to approach to the future of their civil and

professional liability occurs.

Research the world in the identity formation of students in the process of the educational functions of educational activities in higher educational institutions also play a key role to identify that rated as a natural process. They critical thinking, social responsibility and will help in the development of professional ethics. Showing the best efficiency among the method of active learning, including group work and project activities, as well as informal education, such as student clubs and volunteer programs are introduced to the elements. Consolidate this approach not only academic knowledge, but also practical skills and values will also evolve.

In the future, for the development and improvement of the functions of university education and the development of bilateral relations among students of the subject madaniyatlararo shaxslararo more active which will help you to integrate programs is recommended. Experienced teachers can support the development of guidance to students and professionals in the display and coaching programs is also important. Various student initiatives and the creation of associations and support, as well as to be substantially enriched the educational experience of students, they can create opportunities for personal and professional growth.
